CT Dental Viewer

PANORAMIC VIEWS OF THE JAW

With a single CT volume that captures the upper or lower jaw, define a pathway to create panoramic reconstructions that include automatically generated cross-cut images and volume-rendered views. Make measurements that are represented on 3D volume-rendered views.

Key features:

- Create panoramic images simply by tracing the dental arch
- View cross-cut from any direction
- Visualize and measure the relationship between the mandibular canal and adjacent teeth
- Create a cine output of serial cross-cut images

MULTI-CLINICAL MULTI-MODALITY MULTI-FUSION
